Abstracts

Global Tight Gas Market is valued at approximately USD 34.0 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 4.8 % over the forecast period 2021-2027. Tight gas is a type of unconventional gas that is confined in a low-permeability source rock deep underground, such as sandstone or limestone. Lower extraction, processing and commercialization cost, increasing levels of expenditure on the expansion of the oil & gas industry has led to the adoption of Tight Gas across the forecast period. For Instance: as per the U.S. dry natural gas production in 2020 was about 33.5 trillion cubic feet (Tcf), an average of about 91.5 billion cubic feet per day and the second-highest annual amount recorded. In 2020, U.S. dry natural gas production was about 10% greater than U.S. total natural gas consumption. Also, with the adoption of advanced technologies the adoption & demand for Tight Gas is likely to increase the market growth during the forecast period. However, the presence of various harmful chemicals in the gas extraction process impedes the growth of the market over the forecast period of 2021-2027.

The key regions considered for the global Tight Gas market study includes Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading region across the world in terms of market share owing to the innovations in the extraction process of hydraulic fracturing. Whereas, Asia-Pacific is also anticipated to exhibit the highest growth rate during the forecast period 2021-2027. Factors such as growing demand for enhancing energy security across the region would create lucrative growth prospects for the Tight Gas market across Asia-Pacific region.
