## **Abstracts**

Global Tinea Corporis Drugs Market is valued at approximately USD XX billion in 2021 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2022-2029. Tinea corporis is a fungal infection that affects the upper layer of the skin. It can occur or be produced in any part of the body, but it is most commonly found on the legs and arms, particularly in the glabrous skin. Tinea corporis, also known as ringworm, appears on the skin as a ring structure. *Trichophyton rubrum*, *Microsporum canis*, and *Epidermophyton floccosum* are the fungi that cause tinea corporis. The increasing incidence of fungal infections and rising demand for antifungal drugs are key factors driving the market growth.

As per Centers for Disease Control & Prevention (CDC) estimates – as of 2019, fungal diseases resulted in more than 75,000 hospitalizations and around 9 million outpatient visits occur every year for fungal diseases. Also, rising expansion of e-pharmacies and growing healthcare spending worldwide would create lucrative growth opportunities for the market over the projected period. For instance – as per Statista - In 2021, the global e-pharma market was estimated at USD 1 billion, and it is projected to grow to USD 4.8 billion by the year 2031. However, high cost of Tinea Corporis Drugs and stringent drug approval process hinder the market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Tinea Corporis Drugs Market study include Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America dominated the market in terms of revenue, owing to the increasing incidence of fungal diseases of skin as well as rising healthcare spending in the region. Whereas Asia Pacific is expected to grow with the highest CAGR during the forecast period, owing to factors such as rising geriatric and target populations, and increasing investment towards new product development from leading market players in the region.
