## **Abstracts**

Global Tissue Diagnostics Market is valued approximately USD 3.2 billion in 2019 and is anticipated to grow with a healthy growth rate of more than 6.5% over the forecast period 2020-2027. Tissue diagnostics is rapidly serving as the gold standards for diagnosis of cancer. Tissue diagnostics is a type of technique used in removal of tissue from the patient's body, which is then processed, tested and analyzed under the microscope to perceive the diseases, such as cancer. Tissue diagnostics is primarily performed by needle aspiration cytology, core biopsy and open biopsy. The advancements in these techniques and equipment of tissue diagnostics helps in quick and precise determination and evaluation of diseases associated to the tissues. Further, high adoption of automated tissue diagnostics system, increasing incidences of cancer owing to growing aging population, and rise in healthcare expenditure across the globe are the few factors responsible for high CAGR of the market during the forecast period. As per the International Agency for Research on Cancer (IARC), around 17.0 million

new cancer cases and 9.5 million cancer deaths were totaled in 2018 worldwide. Also, it is predicted that it would grow to almost 27.5 million new cancer cases and 16.3 million cancer deaths by 2040. With the rise in prevalence of cancer, the adoption & utility for tissue diagnostics is likely to grow around the world. Moreover, the outbreak of COVID-19 around the world stressed a major concern on the governments of all COVID-19 hit nations. Since, there is an excruciating need to test and screen a large number of patients for possible Sars-Cov-2 infection. As a result, most of the nations are facing a major shortage in the supply for diagnostic kits to test this virus. Therefore, tissue diagnostics virology suppliers are under immense pressure to deliver reliable testing kits, and therefore, there is a surge in demand for tissue diagnostics systems worldwide. However, high degree of consolidation and budget constraints are the factors impeding the growth of market over the forecast period of 2020-2027.

The regional analysis of global Tissue Diagnostics market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading/significant region across the world in terms of market share owing to increasing number of patients with COVID-19 infections, along with the ongoing advancements in the field of gene & immunoassay-based products in the region. Whereas, Asia-Pacific is anticipated to exhibit highest growth rate / CAGR over the forecast period 2020-2027. Factors such as rising elderly population, rising cases of cancer and improving healthcare infrastructure would create lucrative growth prospects for the tissue diagnostics market across Asia-Pacific region.
