## **Abstracts**

Global Tissue Paper Market is valued approximately USD 74.79 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 7% over the forecast period 2022-2028. Tissue Paper is an extremely thin, almost translucent paper used for cleaning and hygiene purposes. The increasing spending on hygiene and sanitation, technological developments in the tissue manufacturing process and strategic initiatives taken by the market players such as expansion, product launches, mergers & acquisitions, etc. are some of the factors, which has led the adoption of Tissue Paper across the forecast period. For Instance: in February 2021, Kruger Products L.P. and KP Tissue Inc. announced the opening of their Sherbrooke production plant for their TAD tissue machine, with a USD 240 million expansion investment. This development is part of the company's strategy to grow its operations and provide tissue products to consumers across North America. In addition, in January 2020, Cartiere Carrara, announced the acquisition of Carind S.R.L. & CRC S.R.L. This acquisition was made in order for the globalization and brand expansion purposes. Also, with the increasing demand for recyclable and environment friendly sanitation products, the adoption & demand for Tissue Paper is likely to increase the market growth during the forecast period. However, impact of paper production on environment impedes the growth of the market over the forecast period of 2021-2027.

The key regions considered for the global Tissue Paper Market study includes Asia Pacific, North America, Europe, Latin America and Rest of the World. Asia-Pacific is anticipated to be domination region across the world as well as expected to exhibit highest CAGR over the forecast period 2021-2027. Factors such as rising disposable
