Abstracts

Global Transport Chairs Market is valued at approximately USD 1.09 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 5.70% over the forecast period 2022-2028. The primary drivers of industry growth are the prevalence of osteoporosis and arthritis, as well as the availability of contemporary, portable, and small mobility aids. It takes little time to develop transport chairs with the help of automation and additive features. Additionally, there have been more inventions in the frame materials category, which is assisting in the growth of this item category. The need for transport chairs expanded significantly during the pandemic due to an increase in patients in healthcare facilities, particularly senior patients because they were more susceptible to COVID-19. The increasing number of patients necessitated the purchase of more transportation and mobility supplies. The COVID-19 outbreak, in the opinion of the WHO, has a disproportionately bad impact on individuals with disabilities. Estimates show that 46 percent of those 60 and older have a handicap. Some of the main growth factors are an increase in accident cases and surgeries, technological advancements, innovation, rising fall rates that increase the need for mobility aids, and a high prevalence of osteoporosis and arthritis. According to the CDC, 24% of all adults in the United States—or 58.5 million people—have arthritis. It is the leading cause of job disability, with a yearly cost of USD 303.5 billion in medical care and missed income. However, high cost of these chairs is expected to hamper the market growth in the forthcoming period.

The key regions considered for the global Transport Chairs Market study include Asia

Pacific, North America, Europe, Latin America, and Rest of the World. North America accounted for the largest share of global revenue. This growth is brought on by increasing older population and a favorable reimbursement system. The rising incidences of disorders associated with lifestyle are anticipated to boost the regional market over the course of the forecast period. A sophisticated healthcare system, the presence of big corporations, high levels of disposable money, and considerable lifestyle changes are also contributing to the regional sector's expansion. The growing elderly population portends a serious socioeconomic load in this area. Over the projection period, the region with the fastest growth will likely be Asia Pacific.
