Abstracts

Global Trash rack Market is valued approximately at xxx billion in 2020 and is anticipated to grow with a healthy growth rate of more than xxx over the forecast period 2021-2027. A trash rack is a wooden or metal structure provided with a cage like body designed to act like a comb to hold water-borne debris from entering a water mill. The demand for removing trash or solid waste from the water survivors is increasing for better hygiene of water which in turn is increasing the overall demand for trash rack market. Increasing dam construction for the water management serves as another driver for the market. For instance, there are many schemes initiated by the government of India such as Watershed Development Project in Shifting Cultivation Areas, Rashtriya Krishi Vigyan Yojana (RKVY), Soil and Water Conservation in the Catchment of River Kopili, Accelerated Irrigation Benefits Programme (AIBP) (WDPSCA). As of 2017, overall dam capacity in Canada was 841.51 km³ that holds the account for 11.82% of the world's total dam capacity. The top 5 countries i.e. China, Russian Federation, the United States of America, and Brazil account for 54.93% of dam capacity in the world. The world's total dam capacity was approximately 7,117.44 km³ in 2017. However, presence of the purification chemicals and utilization of alternate methods such as filters, UV Light Devices, Disinfecting Tablets to clean water impedes the growth of the market over the forecast period of 2021-2027. Also, favorable government initiatives for water management and efforts to keep the water reservoirs clean is likely to increase the market growth during the forecast period.

The regional analysis of global Trash rack Market includes key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading region across the world in terms of market share owing to development of the stormwater management systems across the countries like United States and Canada. Whereas, Asia-Pacific is also anticipated to exhibit highest growth rate over the forecast period 2021-2027. Factors such as developing technologies and surging demand for the better developed water management systems would create lucrative growth prospects for the Trash rack Market across Asia-Pacific region.
