Abstracts

Global Ulcerative Colitis Market is valued approximately at USD XX billion in 2020 and is anticipated to grow with a healthy growth rate of more than 5.3% over the forecast period 2021-2027. Ulcerative colitis (UCs) is a chronic, inflammatory condition affecting the colon or large intestine. However, researchers think that it is an excessive reaction to a microbial stimulus, the origin of ulcerative colitis is not recognized. The UC is characterized by colon inflammation and has symptoms of stool blood, diarrhoea, and abdominal discomfort. UC is more frequent between men and has a geographical variance from north to south. One possible explanation is the variations in exposure to UV radiation that contribute to a relative deficit in vitamin D in Arctic regions. People living in lower latitudes will develop UC more often than people living in greater latitudes. The market is driven by increase in patient assistance programs and growing incidence and prevalence of Ulcerative Colitis worldwide. For instance, Ulcerative colitis occurs in 9-20 instances per 100,000 people per year globally, according to a Whitney D. Lynch et al. research report released by the NCBI (National Center for Biotechnology Information, June 2020). It is 156 to 291 cases per 100,000 individuals annually. The prevalence of ulcerate colitis in adulthood is higher. In non-smokers or those who recently stopped smoking, there is an increased prevalence of ulcerative colitis. However, side-effects of medications may impede market growth over the forecast period of 2021-2027.

Geographically, North America is dominating the ulcerative colitis market, due to increasing prevalence of Ulcerative Colitis and the presence of key players in the region, beside the ongoing funding for the development of new therapeutics for the treatment of the condition.
