Abstracts

Global Urinalysis Market is valued approximately at USD 3.3 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 7.2% over the forecast period 2021-2027. A urinalysis is used to detect and treat a variety of diseases and conditions, including kidney disease, urinary tract infections, and diabetes. Urinalysis is a chemical, physical, and microscopical analysis of urine to detect the presence of medicines or illnesses. Urinalysis and Sediment Urinalysis are the two forms of urinalysis. The concentration, appearance, and substance of urine are all checked during a urinalysis. Abnormal urinalysis results may indicate an illness or disease. The rising prevalence of chronic diseases and the increasing use of point-of-care testing are projected to be the primary drivers of market development. The term "urinary tract infection" refers to an infection that affects any portion of the urinary tract. Urinary tract infections are common in women, according to Therapeutic Advances in Urology, with a worldwide prevalence of 50 percent to 60 percent in adult women in 2019. Furthermore, an increase in the prevalence of diabetes is projected to increase demand for automated analyzers. According to the International Diabetes Federation, 429.9 million individuals worldwide were diagnosed with diabetes in 2019. As a result, the mentioned factors are expected to fuel the growth of the urinalysis market. However, availability of refurbished urine analyzers may impede market growth over the forecast period of 2021-2027.

North America, Europe, Asia Pacific, and the Rest of the World cover the worldwide urinalysis market. North America held the largest share of the worldwide urinalysis

market. The growing geriatric population, implementation of favorable government policies, increasing healthcare expenditure, improved healthcare infrastructure, and the availability of technologically advanced instruments are all factors contributing to the growth of the North American urinalysis market.
