Abstracts

Global Urinary Catheters Market is valued approximately at USD 1.9 billion in 2019 and is anticipated to grow with a healthy growth rate of more than 5.5% over the forecast period 2020-2027. Urinary catheters are used in patients with urinary incontinence, urinary dysfunction and other urological conditions. A urinary catheter is a versatile tube used to empty the bladder and store urine in a drainage bag, that a medical practitioner typically implants into the patient's bladder. The urinary catheter may be inserted either by a urethral catheter or through a small opening created in the lower mid-region (suprapubic catheter). Growing cases of urinary incontinence, increasing number of surgical procedures across the globe, high incidence of prostate cancer, and the favorable reimbursement scenario are expected to fuel growth on the global urinary catheter industry. According to the International Continence Society, 63 million people worldwide suffered from acute urinary incontinence in 2018. In addition, urinary incontinence prevalence rates are higher in the elderly population and among nursing home patients. Rising geriatric population is also projected to fuel demand growth. For example , the World Health Organization expects geriatric population to hit 2 billion by 2050, up from 900 million in 2015. However, complications associated with

catheterization and the availability of alternatives is expected to hamper the market growth. Whereas, growing preference for single-use catheters and self-catheterization is expected to create significant growth opportunity in the market over the forecast period.

The regional analysis of global Alopecia market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading/significant region across the world in terms of market share owing high prevalence of diseases, growing geriatric population, the availability of advanced interventional products in the region . Whereas, Asia-Pacific is also anticipated to exhibit highest growth rate / CAGR over the forecast period 2020-2027. Factors such as rising elderly population, increasing prevalence of chronic diseases, and increasing demand for advanced therapies and products would create lucrative growth prospects for the Alopecia market across Asia-Pacific region.
