Abstracts

Global Urinary Tract Cancer Market is valued approximately USD 2.02 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 18.6% over the forecast period 2022-2029. Urinary Tract Cancer is a type of cancer that affects urethra, bladder, and renal pelvis. Urethral cancer affects the tube that carries urine from bladder to outside of the body. Whereas in Bladder Cancer the healthy cells in the bladder lining called as urothelial cells, change, and grow out of control and form a tumor. Chemotherapy, and Immunotherapy are used as treatment procedure for treatment of Urinary Tract Cancer. The increasing prevalence of bladder cancer and growing number of funding activities from private & government organizations as well as strategic initiatives from leading market players are key factors accelerating the market growth.

According to the World Cancer Research Fund International – in 2020, around 573,278 new cases of bladder cancer were reported worldwide, representing 3.2% of all cancer type. Moreover, as per American Cancer Society's estimates – in 2022, around 81,180 new cases of bladder cancer (about 61,700 in men and 19,480 in women) reported across the United States.
