Abstracts

Global Urine Analyzer Market is valued at approximately USD 4.33 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 6.2 % over the forecast period 2022-2028. Urine Analyzers are clinical urine testers that analyze the physical and chemical properties of urine, as well as its microscopic appearance, to assist in medical diagnosis. Rising healthcare expenditure, rising geriatric population, raising awareness about the availability among consumers, and rising prevalence of liver and kidney diseases have driven the adoption of Urine Analyzers across the projected period. For Instance: According to the National Kidney Foundation, one in every three persons in the United States is at high risk of developing kidney disease, and the condition affects an estimated 37 million people in the country. Also, rising awareness about the availability among consumers, rising proportion of health conscious people, and rising research & development activities are most likely to boost the overall growth of the Urine Analyzer market. However, availability of refurbished products and influx of cost effective and low-quality products can obstruct the market's expansion over the projection period of 2021-2027.

The key regions considered for the global Urine Analyzer market study include Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading region across the world. Rising sales of technologically advanced instruments are driving the market growth in North America. Whereas, Asia Pacific is

also anticipated to exhibit the highest growth rate over the forecast period 2021-2027. The market is expected to grow during the projected period, due to rising prevalence of liver and kidney disease and rising disposable income.
