Abstracts

Global Urology Lasers Market is valued at approximately USD 1.04 billion in 2022 and is anticipated to grow with a healthy growth rate of more than 6.0% over the forecast period 2023-2030. Urology lasers deal with diagnosing and treating conditions affecting the urinary tract system in both men and women, as well as the male reproductive system. Lasers are used in urology to perform various surgical procedures with precision and minimal invasiveness. The Urology Lasers market is expanding because of factors such as the increasing prevalence of urology disorders and rising demand for minimally invasive surgical procedures.

Urology lasers are advanced medical devices that use laser technology to diagnose and treat various urological conditions. Thus, rising prevalence of urological disorders is driving the market growth. According to the Global Forum on Incontinence, 2020, approximately 400 million people globally experience urine incontinence or 4-8% of the population. In addition, according to the Journal of Urology 2018, 12% of the world's population is predicted to have urolithiasis by 2025. In addition, the American Cancer Society estimates that there were around 81,400 new cases of bladder cancer in Americans in 2020 (men: 62,100, women: 19,300), and that it contributed to roughly 17,980 fatalities in America. In addition, increasing technological advancement in laser technology and rising research and development activities for urology laser devices are creating an ulcerative opportunity in the market. However, the high cost of Urology

Lasers stifles market growth throughout the forecast period of 2023-2030.

The key regions considered for the Global Urology Lasers Market study includes Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. North America dominated the market in 2022 owing to increasing disease prevalence, the presence of key market players, and rising healthcare expenditure for research and development activities. Asia Pacific is expected to grow significantly during the forecast period, owing to factors such as rising disease prevalence, an increase in the number of collaborations and partnerships for lasers technology development, geographic expansion of key players, and active participation of government in the market to spread awareness among citizen.
