Abstracts

Global Vaccine Adjuvants Market is valued approximately at USD 0.70 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 10.5% over the forecast period 2021-2027. Vaccine adjuvant is an immunological agent that helps in the modification of other agents' effects. It is included in the vaccination to boost the immune response and provide long-lasting protection against the antigen. Adjuvants are added to vaccines to improve the body's response to vaccination while also reducing the number of vaccine doses given to patients. Aluminum hydroxide and paraffin oil are the most often utilized adjuvants. Vaccine adjuvant also decreases the quantity of administered foreign material. It has also been used in research and for commercial purposes. The market growth is driven by high prevalence of infectious and zoonotic diseases and increasing focus on immunization programs from various government bodies. For instance, various governmental organizations across the globe are promoting and creating awareness about vaccination against diseases such as anthrax, BCG, hepatitis, HPV, influenza, varicella, smallpox, and other illnesses. The US government provided USD 290 million in foreign aid to the Global Alliance for Vaccines and Immunization (GAVI, now known as GAVI, the Vaccine Alliance) in 2019 and USD 226 million to the Department of Health and Human Services (HHS) to support child vaccine campaigns in other countries. However, stringent regulatory environment and time-consuming approvals may impede market growth over the forecast period of 2021-2027.

A rise in investments for R&D of novel medicines, as well as an increase in deadly epidemic illnesses, are driving the vaccine adjuvants market in the North American area. As a result, vaccination against acute and chronic illnesses is required. In addition, the existence of significant market participants in the United States increases product penetration. Adjuvance Technologies, Inc., for example, has created a portfolio of adjuvants for the treatment of a variety of diseases.
