Abstracts

Global Vapor Permeability Films Market is valued approximately XXX billion in 2020 and is anticipated to grow with a healthy growth rate of more than XXX over the forecast period 2021-2027. The term 'vapor permeable films' (also known as 'breathable films') refers to a type of film that is made up of a combination of polymers and minerals. These films are noted for having a microporous structure that allows vapor to pass through. These items are laminated using adhesives on a non-woven web. The basic ingredients utilized to make these films include polyester, polyethylene, and polypropylene, among others. Attention to sustainable packaging solutions around the world is one of the key drivers of growth in the breathable film market. Optimized packaging systems for effective and efficient delivery using flexible packaging Globalization, which leads to accelerated growth of imports and exports by manufacturers and companies, is accelerating market growth. The emergence of large supply chains, the growing role of logistics in expanding e-commerce platforms, and the high acceptance of these films due to their low cost, light weight, and damage resistant properties continue to impact the market. For instance, in 2018, Arkema Group developed a new technology for producing monolithic breathable membranes. However, strict regulatory challenges and availability of alternative materials for films impede the growth of the market over the forecast period of 2021-2027. Also, increasing focus on sustainable solutions is likely to increase the market growth during the forecast period.

The regional analysis of global Vapor Permeability Films Market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. Asia Pacific is the leading region across the world in terms of market share owing to growing consumption of alcoholic beverages and rise in the demand for ready-to-drink fruit juices in the food & beverage packaging industry. Whereas, Europe is also anticipated to exhibit highest growth rate / CAGR over the forecast period 2021-2027. Factors such as increase in the usage of canned food products in these regions would create lucrative growth prospects for the Vapor Permeability Films Market across the region.
