Global Vehicle Occupancy Detection System Market is valued approximately at USD 27.82 million in 2019 and is anticipated to grow with a healthy growth rate of more than 18.50% over the forecast period 2020-2027. Vehicle occupancy detection systems are electronic systems used inside a vehicle for vehicle identification, detection, and passenger counting purposes. In order to monitor and operate high occupancy vehicle (HOV) lanes and high occupancy toll (HOT) lanes, the vehicle occupancy detection system plays an important role in law enforcement. These systems are mounted on top of the HOV lanes with the help of racks at specific distances throughout the HOV lanes or at HOV toll booths. A typical vehicle occupancy detection system consists of vehicle detector, camera system, and video analytics systems. They have the ability to keep the roads safer by reducing the number of accidents which is expected to enhance the demand for the vehicle occupancy detection system.. For Instance: According to World Economic Forum, these are the cities with the highest level of congestion, with Bogota in Colombia ranking at number one. The reasons for congestion include poor public transportation, geography and more people driving cars. In Bogota, the average person loses 191 hours a year due to traffic. In the world's biggest cities, the demand to drive far outstrips the supply of roads. As a result, commuters in major metropolitan areas face massive congestion. In 2019, the two cities that topped the list were Bogota, Colombia and Rio de Janeiro, Brazil, with the average person losing 191 hours and 190 hours to traffic each year, respectively. However, different weather conditions decreases the accuracy of the vehicle occupancy system which impedes the growth of the market over the forecast period of 2020-2027. Also, Opportunity is the government

policies to make modifications in their regulations to ensure the safety of their citizens, this will lead to the adoption of vehicle occupancy detection system.

The regional analysis of global Vehicle Occupancy Detection System market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading/significant region across the world in terms of market share owing to the technological advancements and growth of the automotive sector in the region. Whereas, Europe is also anticipated to exhibit highest growth rate / CAGR over the forecast period 2020-2027.
