Abstracts

Global Vessel Traffic Services Market is valued approximately USD XXX billion in 2019 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2019-2026. A vessel traffic service (VTS) is a marine traffic monitoring system established by harbour or port authorities. The VTS systems use automatic identification system, VHF radiotelephony radar and closed-circuit television (CCTV) to keep track of vessel movements and provide navigational safety in a limited geographical area. These services are implemented by authority with an aim to improve the safety and efficiency of vessel traffic and protect the environment. The services have the ability to interact with the traffic and respond to traffic positions in the VTS area. Application of vessel traffic services provides a unified operational traffic scenario in real-time that supports efficiency in protection of water environment, security of port infrastructures, improvement of navigation safety and traffic planning. Vessel traffic services are instigated in the water and equip vessels with an access to information with the help of transmissions by airing it on very high frequency (VHF) radio. The upsurge in the vessel movements specially through the exports and imports of merchandise across the globe is expected to drive the market. As per the International Maritime Organization, 90% of the global trade is carried by the maritime route. As per US Bureau of Transport Statistics, Vessels moved 41.9% of the freight by value and 70.7% of the freight by weight of the US International Trade in 2018. Moreover, the advancement in the management services through the adoption of IoT and big data further fuels the market growth. However, High Cost of the installation impedes the growth of the market over the forecast period of 2020-2026.

The regional analysis of global Vessel Traffic Services market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading/significant region across the world in terms of market share owing to the developed infrastructure and rapid adoption of the advanced technology. Whereas, Asia-Pacific is also anticipated to exhibit highest growth rate / CAGR over the forecast period 2020-2026. Factors such as rising vessel traffic in the region owing to the increasing import and export activities would create lucrative growth prospects for the Vessel Traffic Services market across Asia-Pacific region.
