Abstracts

Global Veterinary Diagnostic Market is valued at approximately USD XX billion in 2022 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2023-2030. Veterinary diagnostics is the process of identifying and determining the nature or cause of diseases in animals. It plays a crucial role in veterinary medicine by helping veterinarians make informed decisions about the health and treatment of animals. Diagnostic tests in veterinary medicine are designed to detect the presence of pathogens, abnormalities, or other health-related conditions. These tests can be applied to a variety of animals, including pets, livestock, and wildlife. The key factors driving the market growth are the growing adoption of pet ownership, rising animal health expenditure, the growing burden of animal zoonotic diseases, and rising Prevalence of Animal Diseases that are anticipated to support the market growth during the projected period 2023-2030.

Additionally, rising pet ownership and the growing human-animal bond have led to an increased demand for veterinary services, including diagnostics. According to the 2021-2022 APPA National Pet Owners Survey, the number of U.S. households that own

cats is 45.3 million, Dog 69 million, Horses 3.5 million, Reptile is 5.7 million and small animals are 6.2 million. As a result, the growing pet ownership is anticipated to support the market growth. Moreover, growing veterinary healthcare spending and growing number of veterinary practitioners is anticipated to create a lucrative opportunity for the market over the projected period. However, the high cost of veterinary diagnostic tests stifles market growth throughout the forecast period of 2023-2030.

The key regions considered for the Global Veterinary Diagnostic Market study includes Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. North America dominated the market in 2022 owing to the growing pet ownership, rising animal diseases, growing advancements in diagnostic technologies, and rising veterinary healthcare spending. Whereas, the Asia Pacific is expected to grow with the highest CAGR over the forecast period, owing to factors such as the growing awareness about zoonotic diseases and increased pet expenditure, increasing demand for livestock, growing Point-of-Care Testing (POCT) adoption, and rising prevalence of animal diseases.
