## **Abstracts**

Global Veterinary Telemetry Systems Market is valued approximately USD XX million in 2021 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2022-2028. The veterinary telemetry system is a device that is used to monitor the vital signs of animals that including blood pressure, respiratory rate, pulse rate, temperature, etc. This device helps in electronically collecting data and transmitting that information to receiving equipment for monitoring animals' health status. The growing pet expenditure, an increasing number of veterinary surgeries, and surging demand for remote patient monitoring in veterinary care are some prominent factors that are bolstering the global market demand. For instance, as per the Insurance Information Institute, in 2018, the total expenditure on the pet industry was estimated to account for nearly USD 90.5 billion, which is progressively rising and reached around USD 123.6 billion in 2021. However, a lack of awareness regarding veterinary telemetry systems and the dearth of skilled professionals impedes the growth of the market over the forecast period of 2022-2028. Also, the rising technological advancements in telemetry and the increasing number of strategic initiatives by the key market players are anticipated to act as a catalyzing factor for the market demand during the forecast period.

The key regions considered for the global Veterinary Telemetry Systems Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America is the leading region across the world in terms of market share owing to the increasing adoption of pet insurance and rising number of market players.
