## **Abstracts**

Global Virtual Rehabilitation and Telerehabilitation Systems Market valued approximately USD 172.8 million in 2018 is anticipated to grow with a CAGR of 19.10% over the forecasted period of 2019-2026. Virtual Rehabilitation and Telerehabilitation System is a term used to describe the provision of rehabilitation across the spectrum of acute, sub-acute and community settings at a distance, using telecommunications technology as the service delivery medium. Telerehabilitation relates to the services delivered by a number of health disciplines including physiotherapy. Telerehabilitation utilizes a broad range of technologies to facilitate physiotherapy treatment. The market growth is primarily driven by low operational cost of virtual rehabilitation and telerehabilitation than conventional in-clinic rehabilitation. Additionally, surging trend of using computer assisted rehabilitation systems such as a virtual environment, training platform (motion base), a sensor system (motion capture), and D-flow software, is further likely to propel the growth of the market. However, lack of awareness among healthcare professionals and shortages of skilled workforce are expected to hamper the market growth.
