## **Abstracts**

Global Warehouse Automation Market is valued at approximately USD xx billion in 2020 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2021-2027. The key factors fueling growth in the global warehouse automation market include increased adoption of industrial IoT, expanding urbanization, and rising e-commerce sales. The market is expected to develop in the coming years, owing to an increase in the usage of artificial intelligence and a rise in the adoption of robotics in warehouse automation. Automation in warehousing provided a lot of convenience in terms of lowering overall business costs and decreasing product delivery problems. Despite the benefits, 80 percent of warehouses 'still manually run with no supporting automation,' according to DHL, a notable 3PL company and a major end-user of warehouse automation technologies. Furthermore, warehouses that employ conveyors, sorters, and pick-and-place solutions, among other (non-automated) equipment, account for 15% of all warehouses. On the other hand, only 5% of modern warehouses, are fully automated. Furthermore, the shortage of skilled labor and the mechanical hurdles connected with warehouse automation would limit industry expansion. Whereas, increasing development in technologies for automation in market will offer opportunities for manufacturers in forecasting years.

The main regions of Asia Pacific, North America, Europe, Latin America, and the Rest of the World are included in the geographical analysis of the worldwide Warehouse Automation market. In 2020, the North America region dominated the Warehouse
