Abstracts

Global Wastewater Recovery Systems Market is valued approximately at USD 27.21 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 8.0% over the forecast period 2021-2027. Wastewater recovery is the extraction of clean water from industrial wastewater and effluent. This reclaimed water may be recycled and reused in the plant for procedures consisting of cooling tower or boiler blowdown. Alternatively, it could be bought on for irrigation or different purposes. Adopting of sustainable approach by Reduce-Recycle-Reuse and Growing environmental awareness and regulations are the factors which are driving the growth of Wastewater Recovery Systems market. Furthermore, global Initiatives and programs for zero liquid discharge will be anticipating the growth of market in forecasted period. For instance: According to the report of UN water in 2021, it is likely that over 80% of wastewater globally is released to the environment without adequate treatment. Also, 44% of household wastewater is not safely treated. This will create opportunities to treat waste water and reuse it in agriculture and industrial sectors. However, large investments required for wastewater treatment technologies may impede market growth over the forecast period of 2021-2027.
