Abstracts

The global water bus market is projected to grow from USD 1.16 billion in 2024 to USD 1.82 billion by 2032, registering a CAGR of 5.1% during the forecast period 2024-2032. The growth of this market is driven by rising urbanization, the demand for sustainable transportation solutions, and advancements in maritime technologies.

Water buses are emerging as an eco-friendly transportation alternative in urban areas, addressing the challenges of traffic congestion and pollution. They are increasingly integrated into urban mobility strategies, providing an efficient and scenic transportation mode for commuters and tourists. The adoption of hybrid and electric propulsion systems is a notable trend in the market, reflecting the global shift toward greener transportation solutions.

The intercity segment dominates the operation category, owing to its role in reducing urban congestion and linking key metropolitan areas. Additionally, the 51-75 passenger capacity water buses are gaining traction due to their optimal balance of capacity and maneuverability, catering to both commuter and tourist demands.

Europe holds the largest market share, driven by the integration of water buses into public transportation systems in cities like Amsterdam and Venice. Meanwhile, North America is the second-largest market, fueled by investments in modern transit solutions and waterfront developments in cities such as New York and Seattle.
