Global Waterstop Market is valued approximately at USD 2.30 Billion in 2020 and is anticipated to grow with a healthy growth rate of more than 5.1% over the forecast period 2021-2027. Waterstop is an element of concrete structures used in construction to prevent the movement of fluid. It is widely used in the various construction projects such as dams, tunnels, canals, aqueducts, water treatment facilities, storage tanks, foundations, parking structures, and others. The global Waterstop market is being driven by the rising investment in the water management projects. For instance: in 2018, US Department of Agriculture (USDA) invested USD 256 million in 35 states to improve water and wastewater infrastructure. Also, in April 2021, the construction of Chimney Hollow Dam started in Larimer County. Another major driving factor for the market is the increase in construction projects in the region. For instance: in March 2021, Government of Canada launched Rapid Housing Initiative in Vancouver to provide affordable housing to the citizens. However, high costings of the product and lack of awareness towards its use may impede market growth over the forecast period of 2021-2027. Also, with the technological advancements related to the manufacturing and the initiatives for saving water wastage in the construction structures, the adoption & demand for Waterstop is likely to increase.

The key regions such as Asia Pacific, North America, Europe, Latin America, and Rest of the World are evaluated for the regional analysis of the global Waterstop Market. Asia

Pacific is the leading region and is also anticipated to exhibit the highest CAGR over the forecast period 2021-2027 due to the heavy construction, favorable government initiatives and increase in investments by the large companies in the region to boost the manufacturing sector.
