Abstracts

Global Wearable Tremor Therapy Market is valued at approximately USD XX billion in 2022 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2023-2030. Wearable tremor is the use of wearable devices or technologies designed to alleviate or manage tremors experienced by individuals with conditions such as Parkinson's disease or essential tremors. These devices typically employ sensors and actuators to detect and counteract involuntary shaking movements in real-time. The therapy aims to provide continuous, non-invasive support to individuals affected by tremors, helping them regain control over their movements and improve their quality of life. The Wearable Tremor Therapy market is expanding because of factors such as the rising prevalence of neurological disorders, rising preference for non-invasive treatments, and favorable government initiatives and support for promoting innovation in healthcare technology.

A study supported by the Parkinson's Foundation in late 2022 uncovered a significant rise in Parkinson's disease (PD) diagnoses in the United States. The findings revealed that approximately 90,000 individuals are diagnosed with PD each year, marking a substantial 50% increase compared to the previously estimated annual diagnosis rate of 60,000. Additionally, findings from a 2023 study by the World Federation of Neurology indicate that over 40% of the global population currently grapples with some form of neurological condition. This burden is expected to nearly double by 2050, underscoring

the pressing need for effective interventions and treatments in the field of neurology. Thus, the rising prevalence of neurological disorders is driving the market growth. In addition, rising healthcare expenditure and ongoing technological advancement are creating new opportunities for market growth. However, the availability of alternative treatment options and stringent regulatory requirements for product approval stifles market growth throughout the forecast period of 2023-2030.

The key regions considered for the Global Wearable Tremor Therapy Market study include Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. North America dominated the market in 2022. North America emerged as the leading market for wearable tremor therapy, a trend expected to persist throughout the forecast period. This dominance is primarily attributed to the robust presence of domestic companies in the United States, spearheading the development and commercialization of tremor-reducing devices. These companies are actively engaged in obtaining regulatory approvals for their products, thereby fueling market expansion. For example, in June 2023, Cala Health introduced its latest innovation, the Cala kIQ System, designed to alleviate hand tremors in individuals with essential tremors and Parkinson's disease. This system, cleared by the Food and Drug Administration (FDA), utilizes Transcutaneous Afferent Patterned Stimulation (TAPS) to temporarily alleviate symptoms of postural and kinetic tremors. Such advancements underscore the proactive role of U.S. manufacturers in driving innovation and growth within the Wearable Tremor Therapy Market. Asia Pacific is expected to grow significantly during the forecast period, owing to factors such as rising geriatric population, rising disease prevalence, and rising technological advancement in the region.

Major market players included in this report are:

Cala Health, Inc.

Allevion Therapeutics

Abbott Laboratories

Medtronic plc

Stediwear Inc.

Recent Developments in the Market:

In March 2022, Allevion Therapeutics disclosed the successful evaluation of its Allevx device in the United States. This device underwent clinical testing involving 14 patients with movement disorders, including essential tremor and Parkinson's disease. Remarkably, all patients experienced a reduction in tremors following the therapy.

In March 2021, Encora Therapeutics achieved Breakthrough Device Designation from the U.S. Food and Drug Administration (FDA) for its wristband designed to alleviate hand tremors in adults with essential tremors or Parkinson's disease.
