Global Web Application Firewall Market to reach USD 8.7 billion by 2025.

Global Web Application Firewall Market valued approximately USD 2.25 billion in 2017 is anticipated to grow with a healthy growth rate of more than 18.50% over the forecast period 2018-2025. Web application firewall is a hardware or software solution developed to control and monitor network traffic on web-enabled applications. This firewall establishes a relatively secure barrier between the system and the external environment. It provides web protection at the application layer of the open system interconnection model from many attacks types, such as XSS, SQL injection, cross-site scripting, DT, and RFI. WAF identifies and blocks attempts to exploit known web application vulnerabilities by shortening the window of exposure, while patches are thoroughly tested and deployed.

The regional analysis of Global Web Application Firewall Market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. The North America web application firewall market generated the highest revenue in 2016, attributed to rise in number of security breaches and government regulations related to IT security is expected to stimulate government organizations and companies to enhance their data security infrastructure, which is expected to support the security appliance market growth. The Asia-Pacific web application firewall market is expected to grow at the highest CAGR, owing to the presence of untapped demands and surge in need for better application security solutions.
