Abstracts

Global Wireless Electronic Health Records Market is valued at approximately USD XX billion in 2022 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2023-2030. The Global Wireless Electronic Health Records (EHR) Market refers to the market for electronic health records that can be accessed and shared wirelessly over a network. EHRs are digital records of a patient's medical history and current health status, including diagnoses, medications, allergies, lab results, and more. The major driving factors for Global Wireless Electronic Health Records Market are improved patient care and safety, growing demand for telemedicine and remote patient monitoring and increasing healthcare expenditure. Along with this, advancements in technology and government initiatives for the development of electronic health records are creating lucrative growth opportunities for the market over the forecast period 2023-2030.

In 2019, the U.S. Department of Health and Human Services (HHS) launched the "Promoting Interoperability" program, which incentivized healthcare providers to adopt certified EHR technology and meet certain requirements related to data sharing and patient engagement. Additionally, in 2020, the Indian government launched the National Digital Health Mission (NDHM), which aims to create a digital health ecosystem in the country by providing every citizen with a unique health ID and enabling the digitization of health records. Similarly, in 2021, the European Commission released a proposal for a regulation on a European Health Data Space, which aims to create a secure and privacy-preserving platform for the sharing of health data across the European Union. However, the high cost of Wireless Electronic Health Records stifles market growth throughout the forecast period of 2023-2030.

The key regions considered for the Global Wireless Electronic Health Records Market study include Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. North America is the largest market for wireless EHRs, with the United States being the major contributor. The high adoption rate of digital health technologies, favorable government initiatives, and increasing healthcare expenditure are the major driving factors for the growth of this market. The Asia-Pacific region is expected to be the fastest-growing market for wireless EHRs, driven by increasing government initiatives and funding for digital health, rising healthcare expenditure, and a growing population with a high prevalence of chronic diseases.
