Abstracts

Global Wireless Fire Detection System Market is valued approximately at USD 0.66 Billion in 2020 and is anticipated to grow with a healthy growth rate of more than 10% over the forecast period 2021-2027. Wireless fire detection system sends signal with radio frequency from a sensor and transfers it to fire alarm panel. These heat detectors have a built in thermistors which sense the heat. The growing demand for residential fire safety and stringent fire safety regulations and standard are driving factors for the market. One of the major restraint for the wireless fire detection market is the high cost of wireless fire detection system. The components used in manufacturing are of high quality and expensive thus increasing overall cost of the system. Also, the availability of low cost system smoke and fire alarms makes it difficult for the market to grow.

Advancements in technologies such as artificial intelligence and Internet of Things gives the opportunity to the sector. IoT makes it possible to send real time alerts to smart devices such as smartphones and smart watches.

By region, the Market for global microcontroller is segmented into key regions such as Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America wireless fire detection market valued at around USD 250 million in the year 2019. This growth is driven by factors such as inclination toward improvement of the safety of the homes. Asia Pacific region is expected to grow significantly in the forecast

period.
