Global Wireless Microphone Market is valued approximately USD 2.12 billion in 2019 and is anticipated to grow with a healthy growth rate of more than 5.35 % over the forecast period 2020-2027. A wireless microphone, or cordless microphone, is a non-physical cable microphone that directly links it to the sound recording or amplifying equipment to which it is attached. It is also known as a radio microphone and has a small battery-powered radio transmitter in the body of the microphone that transmits the audio signal through radio waves from the microphone to a nearby receiver device that recovers the audio signal. In the entertainment industry, the need for wireless microphones is growing. Access to high-speed data access and the number of mobile users would contribute to a major rise in the market for video content for entertainment. This is making use of a promising traction for the entertainment industry with the keen interest of the audience in short films, TV series, and so on. Thus, the demand for rich content creates a market pull for different goods or appliances, including wireless microphones, for various audio and video capture devices. Furthermore, as the demand for consumer electronic devices such as smartwatches, smartphones and tablets integrating microphones in the system increases due to the growth in podcasting, public speaking and other activities, it is expected that the wireless microphone market will increase in the future. For Instance Growing Attraction towards Live Events, The number of participants in live sports events and other events worldwide has greatly increased.
