Abstracts

Global Wireless Power Transmission Market is valued approximately at USD 4.92 billion in 2018 and is anticipated to grow with a healthy growth rate of more than 23% over the forecast period 2019-2026. The wireless power transmission technology uses magnetic resonance, induction and capacitive coupling for transmitting power in near field, and microwave/RF and laser/infrared to transmit power in far-field range. This technology is gaining popularity due to the convenience offered to the users. This technology enables the user to get rid of a slew of wires required for powering different devices. The need of effective charging systems is driving the market. Adoption of wireless transmission technology in automotive and electric vehicle charging systems is expected for the further growth of the market. Moreover, robotics market and use of wireless power transmission technology in industrial applications are the major factors likely to create lucrative growth opportunity to the market in the upcoming years. However, non-standardized and uncertified products lead to bad user experience that further acts as a barrier to the growth of industry. High cost of the devices based on wireless power

transmission technology is also restraining the industry growth.
