Abstracts

Global Women Health Disease Diagnosis & Treatment Market is valued at approximately USD XX billion in 2021 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2022-2029. Women Health Disease Diagnosis & Treatment is defined as the field of medicine which is concerned with the treatment and diagnosis of diseases and conditions that have an effect on a woman's health. Menopause, pregnancy, breast cancer, ovarian cancer, cervical cancer, and menopause are just a few examples of the numerous issues unique to women that can be identified through screening, testing, or diagnosis in the field of women's health. Many different tests can be used to identify conditions that have an impact on the health of women. By spotting cancer, removing obstructions, and capturing photos of internal organs, medical diagnostic tools such as mammography, imaging and monitoring systems, biopsy instruments, and others assist doctors screen for and diagnosing disorders. The increasing number of women's health disorders and growing awareness concerning women's healthcare are key factors driving the market growth.

The increasing prevalence of various health disorders among women is contributing towards the growth of the Global Women Health Disease Diagnosis & Treatment Market. For instance – as per Centers for Disease Control & Prevention (CDC) estimates – in the United States around 10% of women (6.1 million) aged 15–44 years are affected by reproductive diseases. Additionally, as per World Health Organization

(WHO) estimates – as of 2020, globally around 48 million couples and 186 million individuals have infertility. Also, favorable government initiatives pertaining to women's health as well as rising healthcare spending in developing regions would create lucrative growth opportunities for the market over the forecast period. However, the high cost associated with women's health disease diagnosis solutions & treatment procedures as well as side effects caused by various drugs impedes the market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Women Health Disease Diagnosis & Treatment Market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America dominated the market in terms of revenue, owing to the growing prevalence of PCOS and postmenopausal osteoporosis, increasing median age of first-time pregnancies, and increased healthcare spending in the US and Canada. Whereas Asia Pacific is expected to grow with the highest CAGR during the forecast period, owing to factors such as the rising prevalence of the reproductive disease among women as well as growing healthcare spending coupled with favorable initiatives from government authorities to promote women's well-being in the region would offer lucrative growth opportunities for the market over the forecast period.
