Abstracts

Global Women's Digital Health Market is valued at approximately USD 1.80 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 19.9% over the forecast period 2022-2029. Digital health is a type of communication technology that is utilized for a variety of medical tasks, including diagnosing and keeping track of women's general health. Women can better and more precisely understand their bodies with the help of digital health. Also, it improves the effectiveness of healthcare delivery and makes medicine more individualized and accurate. The high adoption of preventive healthcare, coupled with the increasing usage of mobile apps for the management of menstrual cycles, fertility cycles, and pregnancy are the key factors that are stipulating the market growth around the world.

The surge in the penetration of smartphones is exhibiting a positive influence on the market demand. Smartphones allow individuals to easily access this medical application without any inconvenience. As per Statista, the number of users of smartphones in 2019 is 287.76 million and the number of users is likely to reach 301.65 million by 2022. Thereby, the growing usage of smartphones and rising proliferation of internet are acting as a catalyzing factor for the market development. Moreover, rising investment in the development of advanced technology, as well as increasing number of chronic and general illnesses and infectious diseases are presenting various lucrative opportunities over the forecasting years. However, the data privacy and security issues and the lack

of awareness about women's mental and physical health are challenging the market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Women's Digital Health Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America dominated the market in terms of revenue, owing to the increasing availability of advanced diagnosis and treatment, along with growing investment in advanced technological infrastructure. Whereas, the Asia Pacific is expected to grow with the highest CAGR during the forecast period, owing to factors such as the rising number of government initiatives and favorable regulatory environment, as well as rising awareness in the market space.
