Abstracts

Global Xylose Absorption Tests Market is valued approximately USD XX million in 2021 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2022-2028. Xylose absorption test is defined as laboratory test utilized to check sugar (D-xylose) absorbing capacity of intestines. Xylose also known as D-xylose, refers to a type of sugar that is normally easily absorbed by the intestines. In xylose absorption test, fasting blood sample is obtained by inserting a needle into a vein in the arm and then the person is given a standard dose of xylose dissolved in water to drink. This test is also performed on urine sample. The rising incidences of malabsorption syndrome and increasing consumption of junk foods and alcohol as well as surging per capita healthcare spending are factors that are accelerating the global market demand. For instance, as per the National Institute of Diabetes and Digestive and Kidney Diseases – as of 2020, around 68 percent of the global population are affected by lactose malabsorption. Furthermore, according to Cystic Fibrosis Foundation Patient Registry- as of 2020, in the United States more than 30,000 people are affected by cystic fibrosis (more than 70,000 worldwide) and 1,000 new cases of CF are diagnosed each year. Also, growing number of geriatric populations and rising healthcare infrastructure in emerging economies are anticipated to act as a catalyzing factor for the market demand during the forecast period. However, lack of awareness towards available tests and less accurate results at early stages of diagnosis impedes the growth of the market over the forecast period of 2022-2028.

The key regions considered for the global Xylose Absorption Tests Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North

America is the leading region across the world in terms of market share owing to presence of well-established healthcare sector and rising incidences of Cystic Fibrosis. Whereas, Asia Pacific is anticipated to exhibit a significant growth rate over the forecast period 2022-2028. Factors such as rising prevalence of malabsorption syndrome and rising healthcare expenditure in the region, would create lucrative growth prospects for the Xylose Absorption Tests Market across the Asia Pacific region.
