Impact of COVID-19 on Composites Market is valued approximately USD XX million in 2019 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2019-2026. A composite material is a substance consisting of two or more constituent materials with substantially different physical or chemical properties that, when mixed, create a substance with different characteristics from the individual components. The composites industry is expected to grow due to expected economic recovery resulting in increasing demand from wind energy, aerospace & defense, and automotive & transportation industries. The rising demand for composites materials from automotive & transportation sector owing to the weight savings property of composites for a given strength level make the use of composites important in the automotive & transportation industry. The automobile and rail industries are focused on raising weight, increasing vehicle performance and harnessing more advanced materials. Car producers across the world face serious impacts because of COVID-19. The most affected countries are the US, Japan, South Korea, Italy, Germany, and the UK, which are the main producing countries in the automobile & transportation industry. Many automakers will experience a strong effect on their 2020 sales from the pandemic situation. Moreover, increasing environmental issues and the quest for high-strength

lightweight material to improve fuel efficiency have put composites in the aerospace & defense industry at the forefront. The COVID-19 pandemic has triggered an ongoing crisis for the global aerospace and defense industry. A drastic decline in sales and cash flow tends to be inevitable in the aircraft manufacturing industry for most airlines, as well as for OEMs and their suppliers. This massive effect on the manufacturers of materials will primarily affect the market for composites in aircraft production.

The regional analysis of Impact of COVID 19 on Composites market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. APAC is the composite's main customer due to strong demand from China, Japan, India and other nations. Significant end-use composite industries on the APAC market include, among others, housing, automobile & transportation, aerospace & defense, and wind energy. Advances in technology, regulatory regulations, and policy standards are some of the main factors of APAC's composites market. However, the COVID-19 pandemic is expected to reduce the region's demand for composites due to ongoing lockdown across various countries in 2020.
