Impact of COVID-19 on IT Robotic Automation Market is valued approximately USD XX million in 2019 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2019-2026. Pandemic COVID-19 (Coronavirus) has caused several IT firms to suspend their company activities to comply with the recent government regulations. This delay in activities impacts directly on the robotic automation market's sales production. However, one of the positive consequences that might arise from the COVID-19 crisis is that manufacturers may become increasingly interested in how robotics and automation would benefit their company from both a output and an improvement in the workforce point of view. Robotic automation has revolutionized the way in which business processes, IT management and process support, workflow processes and back office work are administered. In fact, automation allows performance gains and improved efficiency in workflow operations, thus elevating the quality of work and preventing workers from executing slow and repetitive activities. Further, the use of Robotic Process Automation (RPA) can contribute to business continuity, resilience, and flexibility at a time when the manpower available and traditional ways of working are significantly disrupted. Many autonomous

innovations are being implemented today that boost the industry 's efficiency, precision, and safety, but these innovations find it difficult to provide all of these dimensions for reliable quality performance simultaneously on different platforms. This inevitably provides a separate need for the automation industry for robots, which in effect makes companies more flexible and responsive, which is a must in today 's regional, competitive market. In addition, technical advancements in IT robotics automation decrease errors which increase performance, resulting in extra time for innovation, growth and customer satisfaction.

The regional analysis of Impact of COVID-19 on IT Robotic Automation Market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. In terms of market growth, Asia Pacific region is expected to register considerable growth over the forecast period owing to the rising investment from major players in the emerging economies such as India, China along with many others.
