Abstracts

Indonesia Crop Protection Chemicals Market is valued approximately USD .94 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 5.6% over the forecast period 2021-2027. Crop protection chemicals not only helps in protecting the crops from germs, virus and harmful bacteria but also helps protect the crops from unforeseen climatic conditions which may cause damage otherwise Constantly increasing population and increasing demand for crop production are factors contributing to the market growth. For instance: according to Statista, the total volume production of rice is expected to rise up to 56.3 million metric tons by the year end of 2029 from 52.8 million metric tons in the year 2020. Thus, with an increase in the demand of crops, such as rice, there will be an increase in the demand of Crop Protection Chemicals as well. However, constant variations in the raw material prices and insufficient land for farming impedes the growth of the market over the forecast period of 2021-2027. Also, increasing awareness about crop protection and technological advancements is likely to increase the growth of the market in the forecasting period.
