Abstracts

Global risk analytics Market is valued approximately at USD 28.4 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 14.7% over the forecast period 2021-2027. Risk management is the primary reporting system through which the company monitors and records failure incidents in real time since they have happened. The risk analytics market is being driven by increasing complexities across business process. For instance, growing innovations, lack of information, growth of new technologies such as AI, ML has increased the data processing harder which has become the reason for increased business complexity. Therefore, to make data gathering easy and to solve the problem of decision-making easier corporations are willing to use analytical tools so as to reduce their complexity and get better insights of data. For instance, in April 2019, Citigroup, together with Ernst and young global limited and taking help with SAS Institute, developed an AI powered scoring engine named NextGen. The purpose of this engine was to streamline manual time-consuming procedures.

Furthermore, the risk of security breaches has become a main problem nowadays for corporations. Therefore, the use of reactive risk management inbuilt with artificial intelligence helps in tracking and evaluating breaches and improve the management of companies. For example, a tool under the name Solvency Watch was developed by Moody's Analytics in June 2019. The aim of this tool was to let insurers and chief risk

officers to track their solvency indicators and also allow user to detect various risk associated. However, many organizations fail to recognize the risk to which they can be exposed and hence inhibit themselves from implementing these tools, which can be harmful and can negatively impact the market.

The key regions such as Asia Pacific, North America, Europe, Latin America, and Rest of the World are taken into consideration during the regional analysis of the Risk Analytics Market . North America is the leading region across the world in terms of market share due to the increasing acceptance of analytics tools. For example, banks and financial firms are using analytical tools to reduce frauds and cybercrimes in the region. Whereas Asia Pacific is also anticipated to exhibit the highest growth rate over the forecast period 2021-2027 due to favorable government policies and growing demand for data storage and security.
