US Cataract Surgery Devices Market is valued approximately USD 2.61 billion in 2023 and is anticipated to grow with a healthy growth rate of more than 2.61% over the forecast period 2024-2032. Cataract surgery devices are specialized instruments and equipment used in the surgical procedure to remove cataracts from the eye. Cataracts, cause the lens of the eye to become cloudy, can impair vision. The surgery typically involves the removal of the affected lens and its replacement with an artificial intraocular lens (IOL). Furthermore, US Cataract Surgery Devices Market is witnessing continuous advancements in technology, including the introduction of femtosecond lasers for cataract surgery, improved phacoemulsification machines with enhanced efficiency and safety features, and innovative intraocular lens designs offering better vision outcomes

The US Cataract Surgery Devices Market is driven by aging population in the country is contributing to an increased prevalence of cataracts, as they are more common among older individuals. The shifts towards minimally invasive techniques, such as micro-incision and laser-assisted cataract surgery, is fueling market growth as these procedures offer faster recovery times, fewer complications, and improved visual outcomes compared to traditional methods. Furthermore, the emphasis on value-based care and cost-effectiveness is driving the adoption of efficient and innovative devices that offer superior outcomes while controlling healthcare costs. In addition, advancements in technology, such as the introduction of femtosecond lasers and
