## Abstracts

US Enzyme Inhibitors Market is valued approximately USD 51.39 billion in 2023 and is anticipated to grow with a healthy growth rate of more than 3.67% over the forecast period 2024-2032. Enzyme inhibitors are molecules that interfere with the activity of enzymes, which are proteins that catalyze biochemical reactions in living organisms. These inhibitors can bind to enzymes and disrupt their function, either temporarily or permanently. They can act in different ways, such as by blocking the enzyme's active site, altering its structure, or preventing substrate binding. Enzyme inhibitors are important in various fields, including medicine (as pharmaceuticals), agriculture (as pesticides), and biochemistry (for studying enzyme functions). They are used to regulate biological processes, treat diseases, and understand enzyme kinetics and mechanisms. The growing emphasis on the development of enzyme inhibitors for chronic diseases is a key trend that is primarily supporting the growth of the US Enzyme Inhibitors Market during the estimated period. Pharmaceutical companies are investing heavily in research and development to discover novel enzyme inhibitors that can target these conditions more effectively.

The US Enzyme Inhibitors Market growth is fueled by various factors, such as a robust healthcare infrastructure and enhanced government initiatives with favorable reimbursement policies. Moreover, the increasing prevalence of cancer is propelling the growth of the enzyme inhibitors market in the region. The American Cancer Society's 2023 update projects that over 1.9 million new cancer cases will be diagnosed in the United States this year, excluding basal and squamous cell skin cancers and carcinoma

in situ, except for the urinary bladder. Additionally, an estimated 609,820 cancer-related deaths are expected in the US in 2023. As a result, the rising incidence of cancer in North America is expected to have a major impact on the growth of the market. However, patent expirations of enzyme inhibitor drugs and the accessibility of affordable generic alternatives are likely to stifle market growth between 2022 and 2032.
