US Portable Ultrasound Bladder Scanner Market is valued approximately USD 76.57 million in 2023 and is anticipated to grow with a healthy growth rate of more than 4.09% over the forecast period 2024-2032. A Portable Ultrasound Bladder Scanner is a small medical device that utilizes ultrasound technology to non-invasively measure the volume of urine in the bladder. Its portable probe creates real-time bladder pictures on a screen, and its form facilitates simple mobility inside hospital environments. These scanners are often utilized in clinics, hospitals, and home healthcare settings in order to accurately monitor patients and plan treatments. They are particularly useful for evaluating bladder diseases such as urine retention. The rising shift towards outpatient care is a key trend that is supporting to the growth of the US Portable Ultrasound Bladder Scanner Market. The growing trend towards outpatient care and minimally invasive procedures is driving the demand for portable medical devices including bladder scanners. These devices enable efficient diagnosis and monitoring in outpatient settings, contributing to market expansion across the region.

Portable ultrasound bladder scanners offer a non-invasive way to diagnose and monitor urological conditions, compared to more traditional, potentially uncomfortable procedures. The surge in urological conditions and substantial healthcare investments. According to the February 2024 article in PLOS Pathogens, urinary tract infections (UTIs) are among the most prevalent medical concerns affecting people. The article highlights that UTIs are a primary cause of outpatient visits in the United States and worldwide, with clinics handling millions of cases annually. Therefore, the growing prevalence of chronic diseases is propelling the demand for bladder scanners in the

region. The need for portable medical equipment that enable virtual healthcare delivery has been fueled by the growth of telemedicine and remote patient monitoring services. Healthcare practitioners are able to conduct examinations and consultations remotely because of portable ultrasound bladder scanners, which is expected to drive market development. Also, factors such as new product approvals, rising prevalence of urological disorders, expanding diagnostic procedures, and surge in adoption of portable ultrasound devices in healthcare facilities are fueling the growth of the US Portable Ultrasound Bladder Scanner Market. However, it is anticipated that the high cost of portable ultrasound bladder scanners and the increasing reliance on operators is hampering the market expansion over the projected period of 2024–2032.
