Abstracts

US Sectional Doors Market is valued approximately USD 1.05 billion in 2023 and is anticipated to grow with a healthy growth rate of more than 5.45% over the forecast period 2024-2032. Sectional doors are a type of garage door commonly used in residential, commercial, and industrial settings. They are constructed from multiple horizontal panels or sections that are hinged together, allowing the door to bend and follow the curve of a track when it is opened or closed. These doors are typically made from materials such as steel, aluminum, or wood, providing durability, security, and insulation properties. Sectional doors are operated by a system of tracks, rollers, and springs, allowing them to smoothly move up and down without swinging outwards such as traditional swing doors. Furthermore, Energy-efficient sectional doors are gaining popularity in the US Sectional Doors Market. These doors are designed with advanced insulation materials and sealing systems to minimize heat loss or gain, improve thermal efficiency, and reduce energy consumption for heating and cooling purposes. Energy-efficient doors help homeowners and businesses save on utility costs while also contributing to sustainability efforts.

The US Sectional Doors Market is driven by robust construction activity across residential, commercial, and industrial sectors fuels the demand for sectional doors. As new buildings are constructed and existing structures undergo renovations, there's a corresponding need for reliable and efficient door systems to provide secure access and enhance building functionality. Rising smart home and building automation penetration is driving the adoption of technologically advanced sectional doors in the US market. Homeowners and businesses increasingly seek smart features such as Wi-Fi

connectivity, smartphone control, and remote monitoring capabilities in their sectional doors, offering greater convenience, security, and control over their properties. However, high spending associated to Sectional Doors is going to impede the overall demand for the market during the forecast period 2024-2032.
