## **Abstracts**

US Systematic Review Management Software Market is valued approximately USD 94.52 million in 2023 and is anticipated to grow with a healthy growth rate of more than 6.33% over the forecast period 2024-2032. Systematic Review Management Software is a type of software designed to assist researchers in conducting systematic reviews efficiently and effectively. Systematic reviews are comprehensive, structured assessments of existing literature on a particular topic, aimed at synthesizing evidence to answer specific research questions. Furthermore, rising integration with data sources are gaining attention towards US Systematic Review Management Software Market. To streamline the review process and save time, many systematic review management software solutions have been integrating with external data sources, such as bibliographic databases and reference management tools. This integration allows researchers to easily import and export data, search for relevant studies, and manage references within the software platform.

The US Systematic Review Management Software Market is driven by rising number of research initiatives and educational institutions embracing digital transformation, and growing numerous universities and research institutions across the region. Digital transformation initiatives often focus on improving efficiency and productivity in research processes. Systematic review management software automates repetitive tasks, such as literature screening and data extraction, saving researchers valuable time and resources. This allows researchers to focus more on analysis, interpretation, and decision-making, thereby enhancing overall productivity. In addition, universities and research institutions in the United States prioritize evidence-based research

methodologies to ensure the rigor and quality of their studies. Systematic review management software plays a crucial role in supporting evidence-based research by enabling researchers to conduct systematic reviews, meta-analyses, and literature syntheses that inform decision-making, policy development, and further research. However, high development cost of systematic review management software and lack of expertise is going to impede the overall demand for the market during the forecast period 2024-2032.
