Abstracts

Acrylic Rubber (ACM), also known as a polyacrylic elastomer, is composed of acrylic monomers. It is flexible to add other monomers in this acrylic chain to get the desired properties as per the requirement. They are highly resistant to heat, oxidation, and hot oil resistant. Although it is less resistant to moisture, it is used in seals, hoses, textiles, and adhesives.

According to BlueQuark Research & Consulting, the global Acrylic Rubber market is expected to witness a significant growth rate during the forecast period and likely grow at a CAGR of around 8%. Increasing demand from the automotive industry is the main driver for the Acrylic rubber market. It is needed in automotive seals, transmission, hoses, and gaskets. However, one major disadvantage of Acrylic Rubber is that it has low resistance to moisture, acids, and bases. Due to this, some restrictions apply during its usage in the end-user industries. This may hamper the growth of the market.

Globally, North America and Europe are likely to dominate the market in the forecast period owing to the high demand from end-user industries like automotive and packaging. Asia Pacific region is expected to grow significantly due to rapid urbanization and better lifestyles of the people. With a growing population, transportation increases, which in turn has a positive impact on the market.

The global Acrylic Rubber market is highly fragmented. The major players in the global Acrylic Rubber market are ZEON, NOK CORPORATION, DuPont, Changzhou Haiba Rubber Co., Ltd., among others.

In 2018, Zeon Corporation announced the establishment of a new subsidiary in Thailand for Acrylic Rubber manufacture and sale.
