Abstracts

Carbon Dioxide (CO₂) is used as one of the largest industrial applications in the production of Urea which is the most commonly used fertilizer. Due to the growing population and environmental degradation, there is a continuous decrease in arable land per person, which has significantly increased the consumption of fertilizers and thus increasing carbon dioxide usage. High demand for carbon dioxide in the food industry for freezing meat & poultry, vegetables, and fruits, keeping food cold during transit, and adding carbonation in soft drinks, wines & beers is another market driving factor. Moreover, increasing usage of carbon dioxide in enhanced oil recovery to produce undiscoverable petroleum substances is further boosting the market growth.
