## Abstracts

Ethylene Oxide (EtO) is primarily used in the production of Ethylene glycol (EG) which is a substantial derivative. Ethylene Glycol is extensively used in the production of polyethylene terephthalate (PET), which is further used in the production of fibers, resins, and consumables such as bottles and containers. A high demand of ethylene glycol in the production of PET along with its rising production facilities in the Middle East and Asia, growing usage of glycol ethers as a solvent in cosmetics and liquid soaps and the abundance of extremely cheap ethane in the Middle East which in turn leads to higher production of ethylene oxide are few other factors driving the Ethylene Oxide market growth.

Our Global Ethylene Oxide (EtO) Market report delves into the current and future state of the ethylene oxide market across various regions. Also, the study comprehensively analyzes the ethylene oxide market by segmenting based on geography and by derivative (Ethylene Glycol, Ethoxylates, Ethanolamine, Glycol Ethers, and Others (Polyethylene Glycols, Polyether Polyols, etc.)) and by end-use (Building & Construction, Automotive, Packaging, Healthcare and Others (Textile, Agrochemicals, etc.)). The report examines the market drivers and restraints that are influencing the growth in detail. The study also covers emerging market trends, developments, opportunities, and challenges in the industry. This report also covers extensively researched competitive landscape section with profiles of major companies and their market shares and their projects.
