Abstracts

Under the pressure of weak growth in fertilizer market, industrial restructuring and merging and reorganization in the industry deepen further, the number of enterprises decreased continuously. At the same time, equipments and technological level of fertilizer production have been improved obviously, water-coal slurry gasification technology, powdered coal pressurization gasification technology, S-based compound fertilizer production technology and beneficiation technology of low and middle grade phosphate rock all have been used widely and obtained good benefits. Moreover, new fertilizer products represented by slow controlled release fertilizer and microbial fertilizer developed rapidly, and the expansion rate of this market is much higher than the average of fertilizer industry.

Above positive and negative factors interact, where China's fertilizer market will to go in 2015? Based on an overall analysis and review of China's fertilizer market in 2013, combining policy change and national economy operation, BOABC will make an in-depth analysis on the trend of China's fertilizer market in 2014 and provide a clear judgment for people at home and abroad who focus on China's fertilizer market as a reference for their decision-making.
