### Report Overview

1-Butyne (C<sub>4</sub>H<sub>6</sub>) is a linear alkyne hydrocarbon with a triple bond between the first and second carbon atoms, classified as a terminal alkyne due to its reactive terminal hydrogen. It is a colorless, flammable gas with a distinct odor, primarily used as a chemical intermediate in organic synthesis, particularly in the production of specialty chemicals, pharmaceuticals, and agrochemicals. Its reactivity makes it valuable for cross-coupling reactions, polymerization, and as a precursor for butadiene and other derivatives. Industrial applications often involve controlled environments due to its high flammability and potential health hazards. The compound is typically stored and transported under pressure or as a liquefied gas, requiring strict safety protocols. Market demand is driven by niche applications in research and industrial synthesis, though its usage is limited compared to more stable hydrocarbons.
