### Report Overview

The 100M single-mode single-fiber optical transceiver is a compact, high-performance networking component designed for bidirectional data transmission over a single optical fiber using wavelength-division multiplexing (WDM) technology. Operating at 100 Mbps, it enables cost-effective, long-distance communication (typically up to 20-120 km) by utilizing 1310nm and 1550nm wavelengths for simultaneous upstream/downstream transmission, eliminating the need for dual-fiber infrastructure. These transceivers comply with industry-standard form factors (SFP, SFP+) and protocols, featuring low power consumption and hot-swappable functionality for seamless integration into telecom, enterprise, and industrial networks. Their single-fiber design reduces deployment costs and physical space requirements while maintaining compatibility with single-mode fiber's superior signal integrity over long hauls.
