### Report Overview

The 13C Urea Breath Test Analyzer is a medical diagnostic device designed to detect and measure the presence of *Helicobacter pylori* (*H. pylori*) bacteria in the stomach. This non-invasive test involves the patient ingesting a solution containing urea labeled with the stable isotope carbon-13 (13C). If *H. pylori* is present, the bacteria will break down the urea, releasing carbon dioxide (CO<sub>2</sub>) that contains the 13C isotope. The analyzer then measures the concentration of 13C-labeled CO<sub>2</sub> in the patient's breath, providing a quantitative assessment of bacterial activity. This test is valuable for diagnosing *H. pylori* infections, which can cause gastritis, peptic ulcers, and are associated with an increased risk of gastric cancer. The 13C Urea Breath Test Analyzer offers a convenient, accurate, and reliable method for clinicians to assess *H. pylori* infection status, aiding in the management of related gastrointestinal conditions.
