Report Overview

The 13C Urea Breath Test Kit is a non-invasive diagnostic tool used to detect and monitor *Helicobacter pylori* (*H. pylori*) infections in the stomach. This kit employs the stable isotope 13C-labeled urea as a substrate, which is ingested by the patient. If *H. pylori* is present, the bacteria metabolize the urea, releasing carbon dioxide that contains the 13C isotope. The patient's breath is then analyzed for the presence of 13C-labeled carbon dioxide, indicating the presence of the bacteria. The kit typically includes a collection device for breath samples, reagents, and instructions for administering the test and interpreting the results. This method offers a convenient and reliable alternative to invasive procedures, such as endoscopy, for diagnosing *H. pylori* infections, which are associated with various gastrointestinal disorders, including peptic ulcers and gastritis.
