Report Overview

The 14C Urea Breath Test Analyzer is a medical diagnostic device used to detect *Helicobacter pylori* (*H. pylori*) infection, a bacterium that can cause gastritis, ulcers, and other gastrointestinal issues. This non-invasive test involves the patient consuming a small amount of urea labeled with the radioactive isotope Carbon-14. If *H. pylori* is present in the stomach, it will break down the urea, releasing carbon dioxide that is then absorbed into the bloodstream and exhaled. The analyzer measures the amount of Carbon-14 in the exhaled breath, providing a quantitative result that indicates the presence and severity of the infection. The test is valued for its accuracy, convenience, and minimal discomfort to the patient, making it a preferred method for *H. pylori* diagnosis in many clinical settings.
